YASH KITEY

Security Engineer | DevSecOps Engineer | Cloud Security Engineer

+1 (203) 507-1873 | kiteyyash3@gmail.com | LinkedIn | Blog | Portfolio

I turn security problems into automation. 3+ years embedding security into CI/CD pipelines and infrastructure automation: 100% NCCS/ITSAR compliance at TCS, ~70% faster VM provisioning through a hardened Ansible + Python framework at IPC Systems, and ML-driven ICS/SCADA intrusion detection research. M.S. Cybersecurity & Networks (4.0 GPA); available full-time May 2027.

EXPERIENCE

Infrastructure Security Automation Engineer Intern | *IPC Systems* Jun 2026 – Sep 2026

- Cut VM provisioning time ~70% (5–8 min to ~2 min) for the whole Infra team by building an end-to-end Ansible + Python framework automating the full VM lifecycle (7 idempotent operations incl. provisioning, migration, snapshot, resize, teardown) on a private OpenNebula cloud.
- Eliminated 100% of manual, error-prone console steps org-wide by designing a zero-touch Jira intake pipeline that parses and validates engineer-submitted Excel specs, auto-resolves placement (cluster, datastore, CPU architecture), and drives the OpenNebula API directly.
- Hardened the pipeline with defense-in-depth controls: multi-layer input sanitization, a path-traversal vulnerability found and fixed pre-production, environment-variable secret handling (zero plaintext credentials), and a tamper-evident audit trail for 100% of automated changes.
- Extended coverage beyond Ansible's built-in OpenNebula modules by writing ~25 standalone Python modules against OpenNebula's XML-RPC API, unblocking lifecycle operations the framework otherwise couldn't perform.
- Replaced fragmented, unaudited CLI workflows with a FastAPI-backed internal dashboard, restricted to the R&D team through LDAP group integration and built on strict API data contracts; developed CIS Level 1 VM-hardening Ansible playbooks for baseline enforcement.

Security Engineering Research Intern | *University of New Haven* Aug 2025 – Present

- Built an ICS/SCADA testbed and trained anomaly-based IDS models on 1,000+ labeled network logs using Python, Tshark, and custom pipelines.
- Automated a CVE data pipeline mining 10,000+ code samples by tracking CVE-linked commits and extracting function-level snippets, expanding the searchable vulnerability code base.
- Benchmarked LLM-based vulnerability detection against traditional SAST tools, quantifying accuracy gaps across industrial codebases.

Instructional Assistant – Cybersecurity | *University of New Haven* Feb 2026 – Jun 2026

- Designed a 36-hour, NIST NICE-aligned training program from scratch — zero-to-portfolio in 3 weeks covering Python, cryptography, Wireshark, and ML threat detection.
- Created dual-track lab manuals achieving 100% participant engagement; mentored students through employer-ready GitHub portfolio builds.

System Engineer (Security and DevOps) | *Tata Consultancy Services* Jul 2022 – Jul 2025

- Eliminated MITM and XSS attack vectors across all customer-facing endpoints by configuring CA-signed SSL/TLS certificates and enforcing strict Nginx reverse-proxy policies, achieving zero security incidents post-deployment.
- Reduced deployment misconfigurations to near-zero across 3 release cycles by automating secure platform deployments with Ansible and Python, cutting 40% of manual configuration steps.
- Reduced mean-time-to-detect anomalies from hours to under 45 minutes by building Python/Ansible health-check automation for 12+ production microservices covering log analysis and threat detection.
- Achieved 100% compliance on all audited systems by leading NCCS/ITSAR audits end-to-end: validated 100+ controls, closed all findings.
- Cut release errors 40% by embedding security gates into CI/CD (Git, Jenkins, Ansible) with artifact validation and automated rollback.

PROJECTS & ACTIVITIES

- **Cyber Threat Automation Pipeline (AI):** co-built and demoed live at UNH's 2nd annual Cyber Threat Intelligence Seminar.
- **Threat Actor Analysis, CyberAv3ngers / Unitronics PLC:** root cause, exploitation path, and remediation of the 2023 water-utility ICS attack.
- **Competitions & writing:** NCAE Cyber Games Northeast-2 Regional (blue team defending live infrastructure against a red team); Google Defense Readiness Workshop & SecOps CTF; author of the “Cybersecurity Unlocked” series on Medium (13 episodes).

TECHNICAL SKILLS

Security: Vulnerability Assessment, IDS/IPS, TLS Hardening, IAM, Threat Modeling, MITRE ATT&CK, NIST/ITSAR Compliance, Zero Trust
DevSecOps & CI/CD: Ansible, Jenkins, Git, Docker, Kubernetes, Secure SDLC, CIS Benchmarks, Artifact Validation
Cloud & Infra: OpenNebula, Private Cloud, AWS, Google Cloud, OpenStack, Nginx, LDAP, Microservices
SIEM & Tools: ELK Stack, Kafka, Wireshark, Nmap, OpenSSL, Cisco Packet Tracer
Languages: Python (FastAPI), Bash/Shell, YAML, C++

CERTIFICATIONS & TRAINING

Edureka Certified DevOps Engineer • Google IT Support Professional Certificate • Cisco CCNA • Cisco CyberOps • Palo Alto Cloud Security Fundamentals • Palo Alto Cybersecurity Foundation

EDUCATION

University of New Haven — M.S., Cybersecurity & Networks | GPA: 4.0/4.0 2025 – 2027
University of Mumbai — B.E., Electronics & Telecommunication | GPA: 8.74/10 2018 – 2022
