YASH KITEY

+1 (203) 507-1873 | kiteyyash3@gmail.com | LinkedIn | Blog | Portfolio

Security Engineer | DevSecOps Engineer | Cloud Security Engineer

I break security problems into automation. 3+ years embedding security into CI/CD pipelines, automating compliance (100% NCCS/ITSAR pass rate), and building detection tooling across 12+ production microservices. Currently applying ML to ICS/SCADA intrusion detection and designing workforce-ready cybersecurity training from scratch. M.S. Cybersecurity & Networks (4.0 GPA).

EXPERIENCE

System Engineer (Security and DevOps) | Tata Consultancy Services **Jul 2022 - Jul 2025**

- **Eliminated MITM and XSS attack vectors across all customer-facing** endpoints by configuring CA-signed SSL/TLS certificates and enforcing strict Nginx reverse-proxy policies, **achieving zero security incidents** post-deployment.
- **Reduced deployment misconfigurations to near-zero across 3 release cycles** by automating secure platform deployments using Ansible and Python, **cutting 40% of manual configuration steps.**
- **Reduced mean-time-to-detect anomalies from hours to under 45 minutes** by building Python and Ansible-based health-check automation for **12+ production microservices** covering log analysis, service validation, and early threat detection.
- **Achieved 100% compliance across all audited systems** by leading NCCS/ITSAR audit coordination end-to-end - **validated 100+ security controls**, drove gap remediation, and closed all identified findings.
- **Cut release errors by 40%** by embedding security gates into CI/CD pipelines (Git + Jenkins + Ansible) with **artifact validation, config integrity checks, and automated rollback** triggers.

Security Engineering Research Intern | University of New Haven **Aug 2025 - Present**

- **Built an ICS/SCADA testbed** and trained anomaly-based IDS models on **1,000+ labeled network logs using Python, Tshark, and custom data pipelines**, improving the IDS's detection capability
- Automated a CVE data pipeline that **mined 10,000+ code samples by tracking CVE-linked commits** and extracting function-level snippets, enabling faster vulnerability research and expanding the searchable code base
- **Evaluated LLM-based vulnerability detection models** against traditional SAST tools - quantified detection accuracy gaps across industrial codebases.

Instructional Assistant – Cybersecurity | University of New Haven **Jan 2026 - Present**

- **Designed a 36-hour, NIST NICE-aligned training program** from scratch - zero-to-portfolio in 3 weeks covering **Python, cryptography, Wireshark, and ML threat detection.**
- Created dual-track lab manuals achieving 100% participant engagement; **mentored students through employer-ready GitHub portfolio builds**.

TECHNICAL SKILLS

Security: Vulnerability Assessment, IDS/IPS, SSL/TLS Hardening, IAM, Threat Modeling, NIST/ITSAR Compliance, Zero Trust
DevSecOps & CI/CD: Ansible, Jenkins, Git, Docker, Kubernetes, Secure SDLC, Artifact Validation
Cloud & Infra: , Private Cloud, AWS, Google Cloud, OpenStack, Nginx, Microservices
SIEM & Tools: ELK Stack, Kafka, Wireshark, Nmap, OpenSSL, Cisco Packet Tracer
Languages: Python, Bash/Shell, YAML, C++

CERTIFICATIONS

- Edureka Certified DevOps Engineer
- Google IT Support Professional Certificate

TRAINING

Cisco CCNA | Cisco CyberOps | Palo Alto Cloud Security Fundamentals | Palo Alto Cybersecurity Foundation

EDUCATION

University of New Haven **2025 - 2027**

- M.S., Cybersecurity & Networks | **GPA:** 4.0/4.0

University of Mumbai **2018 - 2022**

- B.E., Electronics & Telecommunication | **GPA:** 8.74/10
